

PI550A1 Series

Basic Frequency Inverter

English Manual

1. Foreword

Thank you for choosing PI550A1 series basic frequency inverter .

The diagram of operating manual ,Maybe slightly different from the product for convenience of explanation. Due to product upgrades, they may be slightly different. Please refer to the actual product.

The end-users should hold this manual,and keep it well for future maintenance & care .

For any problem within the warranty period,please fill out the warranty card and fix it to our authorized dealer

2. Instructions on nameplate

POWTRAN	MODEL	PI 550A1 2R2G3
Inverter model	POWER	2.2kW
Output Power Spec.	INPUT	AC 3PH 380V(-15%)~440V(+10%)50/60Hz
Input Source Spec.	OUTPUT	AC 3PH 0V~Vin 5.1A 0~400Hz
Output Spec.	 ZPM1A01TA04G300001	
Bar code	GUANGDONG POWTRAN POWER ELECTRONICS CO.,LTD	
Production Sequence No.		
Production Address		

Model designation:

5. Keyboard description

5.1 Keyboard Indicators

Indicator flag		Name
Status lamp	RUN	Running indicator light *ON:the inverter is working *OFF:the inverter stops
	LOCAL/ REMOTE	Command indicator light That is the indicator for keyboard operation, terminal operation and remote operation (Communication control) *ON:terminal control working status *OFF:keyboard control working status *Flashing:remote control working status
	FWD/REV	Forward/reverse running light *ON:in forward status *OFF:in reversal status
	TUNE/TC	Motor self-learning/Torque control/Fault indicator

		*Slow flashing:in the motor tuning status *Quick flashing:in the fault status										
Units combination indicator	HzAV	 <table border="1"> <tr> <td>Hz</td> <td>Frequency unit</td> </tr> <tr> <td>A</td> <td>Current unit</td> </tr> <tr> <td>V</td> <td>Voltage unit</td> </tr> <tr> <td>RPM</td> <td>Speed unit</td> </tr> <tr> <td>%</td> <td>percentage</td> </tr> </table>	Hz	Frequency unit	A	Current unit	V	Voltage unit	RPM	Speed unit	%	percentage
Hz	Frequency unit											
A	Current unit											
V	Voltage unit											
RPM	Speed unit											
%	percentage											

5.2 Description of operation panel keys

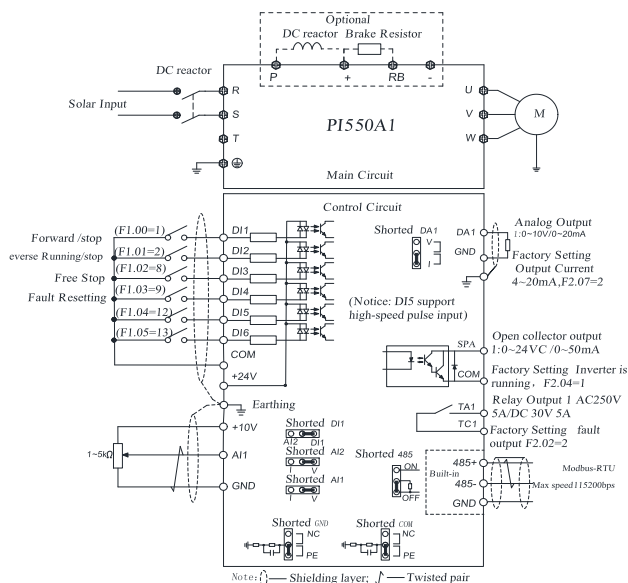

Sign	Name	Function
	Parameter Setting/Esc Key	* Enter into the modified status of main menu * Esc from functional parameter modification * Esc submenu or functional menu to status menu
	Shift Key	* Choose displayed parameter circularly under running or stop interface;choose parameter's modified position when modify parameter
	Increasing Key	* Parameter or function number increasing, set by parameter F6.18.
	Decreasing Key	* Parameter or function number increasing, set by parameter F6.19.
	Running Key	* For starting running in the mode of keyboard control status
	Stop/Reset Key	* For stopping running in the running status;for resetting the operation in the fault alarm status .The function of the key is subject to F6.00
	Enter Key	* Enter the menu screen step by step, set the parameter confirmation.
	Quick Multifunction Key	*This key function is determined by the function code F6.21.
	Keyboard Encoder	* F0.03 setting to 4, and the keyboard potentiometer setting the operating frequency.

6. Standard specifications

Items		Specifications	
Power Input	Rated voltage	AC 1PH 220V(-15%)~240V(+10%) AC 3PH 220V(-15%)~240V(+10%) AC 3PH 380V(-15%)~440V(+10%) AC 3PH 480V(-10%)~480V(+10%)	
	Input frequency	50Hz/60Hz	
	Allowing fluctuations	Voltage continued volatility:±10% Input frequency fluctuation:±5%;	
Control	Control system	High performance vector control inverter based on DSP	
	Control method	V/F control, vector control W/O PG,	
	Automatic torque boost function	Realize low frequency (1Hz) and large output torque control under the V/F control mode.	
	Acceleration/deceleration control	Straight or S-curve mode. Four times available and time range is 0.0~6500.0s.	
	V/F curve mode	Linear, square root/m-th power, custom V/F curve	
	Over load capability	G type:rated current 150% - 1 minute, rated current 180% - 2seconds F type:rated current 120% - 1 minute, rated current 150% - 2 seconds	
	Maximum frequency	1.Vector control:0~300Hz; 2.V/F control:0~3200Hz	
	Carrier Frequency	0.5~16kHz; automatically adjust carrier frequency according to the load characteristics.	
	Input frequency resolution	Digital setting: 0.01Hz Analog setting: maximum frequency*0.025%	
	Start torque	G type: 0.5Hz/150% (Vector control W/O PG) F type: 0.5Hz/100% (Vector control W/O PG)	
	Speed range	1:100 (Vector control W/O PG)	
	Steady-speed precision	Vector control W/O PG: ≤ ± 0.5% (rated synchronous speed)	
	Torque response	≤ 20ms (Vector control W/O PG)	
	Torque boost	Automatic torque boost; manual torque boost(0.1%~30.0%)	
	DC braking	DC braking frequency: 0.0Hz~max. frequency, braking time:0.0~100.0 seconds, braking current value: 0.0%~100.0%	
Jogging control	Jog Frequency Range: 0.00Hz~max. frequency; Jog Ac/deceleration time: 0.0s~6500.0s.		
Built-in PID	Easy to realize closed-loop control system for the process control.		
Automatic voltage regulation(AVR)	Automatically maintain a constant output voltage when the voltage of electricity grid changes		
Personalization	Self-inspection of peripherals after power-on	After powering on, peripheral equipment will perform safety testing, such as ground, short circuit, etc.	
	Common DC bus function	Multiple inverter can use a common DC bus.	
	Quick current limiting	The current limiting algorithm is used to reduce the inverter over current probability, and improve whole unit anti-interference capability	
	Timing control	Timing control function: time setting range(0m~6500m)	
Running		Reference Chapter6 Wiring Diagram	
Protection function	Inverter protection	Overvoltage protection, undervoltage protection, overcurrent protection, overload protection, overheat protection, overcurrent stall protection, overvoltage stall protection, losing-phase protection (optional), communication error, PID feedback signal abnormalities, PG failure and short circuit to ground protection.	
Display	LED display keyboard	Running information	Monitoring objects including: running frequency, set frequency,bus voltage, output voltage, output current, output power, output torque, input terminal status, output terminal status, analog AI1/AI2 value,, motor Actual running speed,PID set value percentage, PID feedback value percentage.
		Error message	At most save three error message, and the time, type, voltage,current, frequency and work status can be queried when the failure is occurred
	Key lock and function selection	Lock part or all of keys, define the function scope of some keys to prevent misuse.	
	IGBT temperature	show the inverter inner IGBT temperature	
Communication	RS485	Built in 485	
Environment	Environment temperature	-10℃ to 40℃ (Temperature at 40 ℃~ 50℃, please derating for use)	
	Storage temperature	-20 ℃~65 ℃	
	Environment humidity	Less than 90% R.H, no condensation.	

	Vibration	Below 5.9m/s ² (= 0.6g)
	Application sites	Indoor where no sunlight or corrosive, explosive gas and water vapor, dust, flammable gas,oil mist, water vapor, drip or salt, etc.
	Altitude	No need degrade use under 1000m,degrade 1% for altitude rise 100m when above 1000m,do not use it above 3000m
	Protection level	IP20
Product standard	Product adopts safety standards.	IEC61800-5-1
	Product adoptsEMC standards.	IEC61800-3
Cooling method		Forced air cooling

7.Wiring Diagram

Notes in main circuit wiring

- (1)Wiring specifications, please implement wiring in accordance with electrical regulations;
- (2)Do not connect AC to the output of frequency converter (U, V, W), otherwise the frequency inverter will be damaged.
- (3)Power supply wiring, please try to use isolation line and pipeline, and the isolation line or pipeline ends grounded.
- (4)Frequency inverter grounding wire can not be grounded together with welding machine, high-power motor or high current load, please grounding alone;
- (5)Grounding \oplus please grounding correctly,grounding resistor less than 10 Ω ;

Notes in wiring control circuit

- (1)Please separate the control signal line from the main circuit line and other power lines.
- (2)To prevent misoperation caused by interference, use twisted or double shielded wires.,specification 0.5-2mm²
- (3)Make sure the permissible conditions of each terminal, such as power supply, maximum permissible current, etc
- (4)The terminal wiring requirements, correct selection of accessories, such as: voltmeter, input power supply, etc. After completing the wiring, please check it correctly and make sure that it is correct before power is available.
- (5)After completing the wiring, please check it correctly and make sure that there is no mistake before power can be turned on.

8. Parameter list

In PI550A1 series frequency inverters, some parameters are "manufacturer reserved", and their serial numbers are not listed in the function parameter table, which leads to the discontinuity of some parameter serial numbers in the table. For the parameters not introduced in the manual, please do not attempt to modify them to avoid causing errors.

d0 group Monitoring function group

Code	Parameter name	Functional Description	Factory setting
d0.00	Running frequency	Actual output frequency	0.01Hz
d0.01	Set frequency	Actual set frequency	0.01Hz
d0.02	DC bus voltage	Detected value for DC bus voltage	0.1V
d0.03	Output voltage	Actual output voltage	1V
d0.04	Output current	Effective value for Actual motor current	0.01A
d0.05	Output power	Calculated value for motor output power	0.1kW
d0.06	Output torque	Motor output torque percentage	0.1%
d0.07	DI input status	DI input status	-
d0.08	DO output status	DO output status	-
d0.09	AI1 voltage (V)	AI1 input voltage value	0.01V
d0.10	AI2 voltage (V)	AI2 input voltage value	0.01V
d0.12	Count value	Actual pulse count value in counting function	-
d0.13	Length value	Actual length in fixed length function	-
d0.14	Actual operating speed	Motor actual running speed	-
d0.15	PID setting	Reference value percentage when PID runs	%
d0.16	PID feedback	Feedback value percentage when PID runs	%
d0.17	PLC stage	Stage display when PLC runs	-
d0.18	HDI(DI5) d pulse input frequency	HDI(DI5) High-speed pulse input frequency display, unit: 0.01Khz	0.01kHz
d0.19	Feedback speed	Inverter actual output frequency	0.01Hz
d0.20	Remaining run time	Remaining run time display, it is for timing run control	0.1Min
d0.21	Linear speed	Show the line speed of DI5 high speed pulse sampling,	1m/Min

		according to the actual sample pulse number per minute and E0.07, calculate the line speed value.	
d0.22	Current power-on time	Total time of current inverter power-on	1Min
d0.23	Current run time	Total time of current inverter run	0.1Min
d0.24	HDI(DI5) impulse frequency	HDI(DI5) high-speed impulse input frequency display, unit: 1Hz	1Hz
d0.25	Communication set value	Frequency, torque or other command values set by communication port	0.01%
d0.27	Master frequency setting display	Frequency set by F0.03 master frequency setting source	0.01Hz
d0.28	Auxiliary frequency setting display	Frequency set by F0.04 auxiliary frequency setting source	0.01Hz
d0.35	Inverter status	Display the running and standby etc status information	-
d0.36	Inverter type	1:G type: Suitable for constant torque load; 2:F type: Suitable for variable torque load (Fans, pumps load)	-
d0.37	AI1 voltage before correction	Input voltage value before linear correction of AI1	0.01V
d0.38	AI2 voltage before correction	Input voltage value before linear correction of AI2	0.01V

F1.05	DI6 terminal function selection		13	★

The functions of digital multi-functional input terminal DI1~DI6 (DI5 can be used as high-speed pulse input terminal) can be set by parameter F1.00~F1.05. The optional functions are shown in the following table:

Set value	Function	Description		
0	No function	The terminal for not use can be set to "no function" to prevent accidental operation.		
1	Forward run (FWD)	External terminals are used to control the FWD run mode of inverter.		
2	Reverse run (REV)	External terminals are used to control the REV run mode of inverter.		
3	Three-wire operation control	This terminal is used to determine the inverter's three-wire control mode. For details, please refer to the instructions of function code F1. ("terminal command mode").		
4	Forward JOG(FJOG)	FJOG means Forward JOG running, RJOG means Reverse JOG running. For Jog running frequency and Jog Ac/deceleration time, please refer to the description of the function code F7.00, F7.01, F7.02.		
5	Reverse JOG(RJOG)			
6	Terminal UP	Modify frequency increment/decrement command when the frequency is referenced by external terminal. Adjust up/down the set frequency when the digital setting is selected as the frequency source.		
7	Terminal DOWN			
8	Free stop	The inverter output is blocked, at the time, the parking process of motor is not controlled by the inverter. This way is same as the principle of free stop described in F3.07.		
9	Fault reset (RESET)	The function make use of terminal for fault reset. It has same function with RESET key on the keyboard. This function can be used to realize remote fault reset.		
10	Run pausing	The inverter slows down and stops, but all operating parameters are memorized. Such as PLC parameters, wobble frequency parameters, and PID parameters. This terminal signal disappears, the inverter reverts to the previous state of running before parking.		
11	External fault normally open input	When the signal is sent to the inverter, the inverter reports fault Err.15, and performs troubleshooting according to fault protection action (For details, please refer to the function code F8.17).		
12	Multi-speed terminal 1	The setting of 16 stage speed or 16 kinds of other command can be achieved through the 16 states of the four terminals. For details, see Table 1		
13	Multi-speed terminal 2			
14	Multi-speed terminal 3			
15	Multi-speed terminal 4			
16	Ac/deceleration time selection terminal 1	The selection of 4 ac/deceleration times can be achieved through the 4 states of the two terminals. For details, see Table 2		
17	Ac/deceleration time selection terminal 2			
18	Frequency source switching	Used to switch between different frequency sources. According to frequency source selection function code (F0.07) settings, the terminal is used to switch between two frequency sources.		
19	UP/DOWN setting (Terminal, keyboard)	When the frequency reference is the digital frequency, this terminal is used to clear the changed frequency value by terminal UP/DOWN or keyboard UP/DOWN, so that the reference frequency can recover to the set value of F0.01.		
20	Run command switch terminal 1	When the command source is set to the terminal control (F0.11 = 1), the terminal can be used to switch between terminal control and keyboard control. When the command source is set to the communication control (F0.11 = 2), the terminal can be used to switch between communication control and keyboard control.		
21	Ac/deceleration prohibited	Ensure the inverter is free from external signals affect (Except for shutdown command), maintain current output frequency.		
22	PID pause	PID is temporarily disabled, the inverter maintains current output frequency, no longer performs PID adjustment of frequency source.		
23	PLC status reset	When PLC pauses and runs again, this terminal is used to reset the inverter to the initial state of simple PLC.		
24	Wobble pause	When the inverter outputs at center frequency. Wobble will pause.		
25	Counter input	Input terminal of the count pulse		
26	Counter reset	Clear counter status		
27	Length count input	Input terminal of the length count.		
28	Length reset	Clear length		
30	High-speed pulse input (Only valid for DI5)	DI5 is used as pulse input terminal.		
32	Immediately DC braking	If the terminal is active, the inverter switches directly to DC braking status		
33	External fault normally closed input	When the signal of external fault normally closed input is inputted into the inverter, the inverter will report fault Err.15 and shutdown.		
34	Frequency change enable	If the function is set to be valid, when the frequency changes, the inverter does not respond to frequency changes until the terminal state is invalid.		
35	PID action direction as reverse	If the terminal is valid, PID action direction opposites to the direction set by E2.03		
36	External parking terminal 1	Under keyboard control mode, the terminal can be used to stop the inverter, same as STOP key on the keyboard.		
37	Control command switch terminal 2	Used to switch between terminal control and communication control. the command source is selected as terminal control, the system will be switched to the communication control mode when the terminal is active; vice versa.		
38	PID integral pause	When the terminal is active, the PID integral adjustment function is paused, but the proportion and differential adjustments of PID are still valid.		
39	Switch between frequency source master setting and preset frequency	When the terminal is active, the frequency source A is replaced by the preset frequency (F0.01)		
40	Switch between frequency source auxiliary setting and preset frequency	When the terminal is active, the frequency source B is replaced with the preset frequency (F0.01)		
43	PID parameter switching	When DI terminal (E2.19 = 1) is used to switch PID parameters, if the terminal is invalid, PID parameters use E2.13~E2.15; if the terminal is valid, PID parameters use E2.16~E2.18		
44	Custom fault 1	When custom fault 1 and custom fault 2 are active, the inverter respectively alarms fault Err.27 and fault Err.28, and deals with them according to the mode selected by the fault protection action F8.19.		
45	Custom fault 2			
48	External parking terminal 2	In any control mode (Keyboard control, terminal control, communication control), the terminal can be used to decelerate the inverter until stop, at the time the deceleration time is fixed for deceleration time 4.		
49	Deceleration DC braking	If the terminal is valid, firstly the inverter decelerates to the initial frequency of stop DC braking, and then switches directly to DC braking status.		
50	Clear current running time	If the terminal is valid, the inverter's current running time is cleared.

F2 group Output terminal parameter set

Code	Parameter name	Setting range	Factory setting	Change
F2.02	Relay 1 output function selection (TA1.TB1.TC1)	0~40	2	☆
F2.04	SPA output function selection (Collector open circuit output terminals)		1	☆

The functions of the relay and SPA output terminal are described as follows:

Set value	Function	Functional Description
0	No output	Output no action
1	Frequency inverter operation	Frequency inverter is operation, there is output frequency, (Can be 0) there is output signal
2	Fault Output (Fault outage)	When the frequency inverter fails and the fault stops, the output is ON signal
3	Frequency Level detection FDT1 output	Please Refer function code F7.23, F7.24
4	Frequency arrival	Please Refer function code F7.25
5	Zero-speed operation (No output when shutdown)	When the frequency inverter runs and the output frequency is 0, the output signal is ON. The signal is OFF when the converter is down.
6	Motor overload forecasting alarm	Before motor overload protection action, the output is ON signal, after the threshold value of overload warning is exceeded. For motor overload parameter setting, refer to function codes F8.02-F8.04.
7	Frequency inverter overload forecasting alarm	The output signal ON 10 seconds before the overload protection occurs.
8	Set count value to arrival	When the count value reaches the value set by E0.08, the output signal is ON
9	Designated count value arrives	When the count value reaches the value set by E0.09, the ON signal is output. Counting function reference E0 group function description
10	Length arrival	When the actual length of detection exceeds the length set by E0.05, the output signal is ON.
11	PLC cycle completed	When a simple PLC completes a cycle, it outputs a pulse signal with a width of 250ms.
12	Accumulated runtime arrival	When the accumulative running time of the converter exceeds the set time of F7.21, the output signal is ON
13	Frequency limiting	When the set frequency exceeds the upper or lower limit frequency, and the output frequency of the frequency inverter also exceeds the upper or lower limit frequency, the output signal is ON
14	Torque limiting	In the speed control mode, when the output torque reaches the limit value of the torque, the frequency inverter is in stall protection state and transmits ON signal at the same time.
15	Operational readiness	When the power supply of the main circuit and control circuit of the frequency inverter is stable, and the frequency inverter does not detect any fault information, and the frequency inverter is in the operational state, the output signal is ON
16	AI1>AI2	When the value of the analog input AI1 is greater than the value of AI2 input, output ON signal.
17	Upper limit frequency arrival	When the operating frequency reaches the upper limit frequency, the output signal is ON.
18	Lower limit frequency arrival (No output when down)	When the operating frequency reaches the lower limit frequency, the ON signal is output. The signal is OFF in downtime.
19	Under voltage state output	When the frequency inverter is under-voltage, the output signal is ON.
20	Communication settings	Please refer to the communication protocol.
23	Zero speed operation 2 (Output when down)	When the output frequency of the inverter is 0, the ON signal is output. The signal is ON when the machine is down.
24	Accumulated power-on time arrives	When the accumulative power-on time of the frequency inverter (F6.08) exceeds the set time of F7.20, the ON signal is transmitted.
25	Frequency level detection FDT2 output	Please refer the function code description F7.26, F7.27
26	Frequency 1 arrival output	Please refer the function code description F7.28, F7.29
27	Frequency 2 arrival	Please refer the function code description F7.30, F7.31

	output	
28	Current 1 arrival output	Please refer the function code description F7.36, F7.37
29	Current 2 arrival output	Please refer the function code description F7.38, F7.39
30	Timed output	When the timing function selection (F7.42) is effective, the ON signal is output after the frequency converter reaches the set timing time.
31	All input overrun	When the value of analog input A11 is greater than F7.51 (Upper limit of A11 input protection) or less than F7.50 (Under A11 input protection), the ON signal is output.
33	Reverse operation	Converter in reverse operation, output ON signal
34	Zero current state	Please refer the function code description F7.32, F7.33
35	Module temperature arrival	When the module radiator temperature (F6.06) of the inverter reaches the set module temperature (F7.40), the ON signal is output.
36	Software current overrun	Please refer the function code description F7.34, F7.35
37	Lower Limit Frequency Arrival (Outage)	When the operating frequency reaches the lower limit frequency, the ON signal is output. The signal is ON in the downtime state.
38	Alarm output	When the frequency inverter fails and the fault processing mode is to continue running, the frequency inverter alarm output.
40	This run time arrives	When the starting time of the frequency inverter exceeds the time set by F7.45, the ON signal is output.

F2.07	DA1 Output Function Selection	0~ 17	2	☆
-------	-------------------------------	-------	---	---

The analog output DA ranges from 0V~10V, or from 0mA~20mA. The calibration relationship with the corresponding functions is shown in the following table:

Set value	Function	Description
0	Operating frequency	0~Maximum output frequency
1	Setting frequency	0~Maximum output frequency
2	Output current	0~2times of rated motor current
3	Output torque	0~2times of rated motor torque
4	Output power	0~2times rated power
5	Output voltage	0~1.2times rated frequency voltage
6	High speed pulse input	0.01kHz~100.00kHz

9. Fault alarm and countermeasures

PI550A1 can provide effective protection when the equipment performance is played fully. In case of abnormal fault, the protection function will be invoked, the inverter will stop output, and the faulty relay contact of the inverter will start, and the fault code will be displayed on the display panel of the inverter. Before consulting the service department, user can perform self-check, analyze the fault cause and find out the solution according to the instructions of this chapter. If the fault is caused by the reasons as described in the dotted frame, please consult the agents of inverter or directly contact with our company.

No.	Fault ID	Failure type	Possible causes	Solutions
1	Err.01	Inverter unit protection	<ol style="list-style-type: none"> 1.The short circuit of inverter output happens 2.The wiring for the motor and the inverter is too long 3.Module overheating 4.The internal wiring of inverter is loose 5.The main control panel is abnormal 6.The drive panel is abnormal. 7.The inverter module is abnormal 	<ol style="list-style-type: none"> 1.Eliminate peripheral faults 2.Additionally install the reactor or the output filter 3.Check the air duct is blocked or not and the fan is working normally or not, and eliminate problems 4.Correctly plug all cables 5.Seek for technical support
2	Err.02	Acceleration overcurrent	<ol style="list-style-type: none"> 1.The acceleration time is too short 2.Manual torque boost or V/F curve is not suitable 3.The voltage is low 4.The short-circuit or earthing of inverter output happens 5.The control mode is vector and without identification of parameters 6.The motor that is rotating is started unexpectedly. 7.Suddenly increase the load in the process of acceleration. 8.The type selection of inverter is small 	<ol style="list-style-type: none"> 1.Increase acceleration time 2.Adjust manual torque boost or V/F curve 3.Set the voltage to the normal range 4.Eliminate peripheral faults 5.Perform identification for the motor parameters 6.Select Speed Tracking Start or restart after stopping the motor. 7.Cancel the sudden load 8.Choose the inverter with large power level
3	Err.03	Deceleration overcurrent	<ol style="list-style-type: none"> 1.The short-circuit or earthing of inverter output happens 2.The control mode is vector and without identification of parameters 3.The deceleration time is too short 4.The voltage is low 5.Suddenly increase the load in the process of deceleration. 6.Didn't install braking unit and braking resistor 	<ol style="list-style-type: none"> 1.Eliminate peripheral faults 2.Perform identification for the motor parameters 3.Increase the deceleration time 4.Set the voltage to the normal range 5.Cancel the sudden load 6.Install braking unit and brake resistor
4	Err.04	Constant speed overcurrent	<ol style="list-style-type: none"> 1.The short-circuit or earthing of inverter output happens 2.The control mode is vector and without identification of parameters 3.The voltage is low 4.Whether suddenly increase the load when running 5.The type selection of inverter is small 	<ol style="list-style-type: none"> 1.Eliminate peripheral faults 2.Perform identification for the motor parameters 3.Set the voltage to the normal range 4.Cancel the sudden load 5.Choose the inverter with large power level
5	Err.05	Acceleration overvoltage	<ol style="list-style-type: none"> 1.Didn't install braking unit and braking resistor 2.The input voltage is high 3.There is external force to drag the motor to run when accelerating. 4.The acceleration time is too short 	<ol style="list-style-type: none"> 1.Install braking unit and brake resistor 2.Set the voltage to the normal range 3.Cancel the external force or install braking resistor. 4.Increase acceleration time
6	Err.06	Deceleration overvoltage	<ol style="list-style-type: none"> 1.The input voltage is high 2.There is external force to drag the motor to run when decelerating. 3.The deceleration time is too short 4.Didn't install braking unit and braking resistor 	<ol style="list-style-type: none"> 1.Set the voltage to the normal range 2.Cancel the external force or install braking resistor. 3.Increase the deceleration time 4.Install braking unit and brake resistor
7	Err.07	Constant speed overvoltage	<ol style="list-style-type: none"> 1.There is external force to drag the motor to run when running 2.The input voltage is high 	<ol style="list-style-type: none"> 1.Cancel the external force or install braking resistor. 2.Set the voltage to the normal range
8	Err.08	Control power failure	The range of input voltage is not within the specification	Adjust the voltage to the range of the requirements of specification
9	Err.09	Under voltage fault	<ol style="list-style-type: none"> 1.The momentary power cut 2.The inverter's input voltage is not within the specification 3.The bus voltage is not normal 4.The rectifier bridge and buffer resistance are abnormal 5.The drive panel is abnormal. 6.The control panel is abnormal 	<ol style="list-style-type: none"> 1.Reset fault 2.Adjust the voltage to the normal range 3.Seek for technical support
10	Err.10	Inverter overload	<ol style="list-style-type: none"> 1.The type selection of inverter is small 2.whether the load is too large or the motor stall occurs 	<ol style="list-style-type: none"> 1.Choose the inverter with large power level 2.Reduce the load and check the motor and its mechanical conditions
11	Err.11	Motor Overload	<ol style="list-style-type: none"> 1. power grid voltage is too low 2.whether the setting motor protection parameters (F8.03) is appropriate or not 3.whether the load is too large or the motor stall occurs 	<ol style="list-style-type: none"> 1.Check the power grid voltage 2.Correctly set this parameter. 3.Reduce the load and check the motor and its mechanical conditions
13	Err.13	Input phase loss	<ol style="list-style-type: none"> 1.The drive panel is abnormal. 2.The lightning protection plate is abnormal 3.The main control panel is abnormal 4.The three-phase input power is not normal 	<ol style="list-style-type: none"> 1.Replace the drive, the power board or contactor 2.Seek for technical support 3.Check and eliminate the existing problems in the peripheral line
14	Err.14	Output phase loss	<ol style="list-style-type: none"> 1.The lead wires from the inverter to the motor is not normal 2.The inverter's three phase output is unbalanced when the motor is running 3.The drive panel is abnormal. 4.The module is abnormal 	<ol style="list-style-type: none"> 1.Eliminate peripheral faults 2.Check the motor's three-phase winding is normal or not and eliminate faults 3.Seek for technical support
15	Err.15	Module overheating	<ol style="list-style-type: none"> 1.The air duct is blocked 2.The fan is damaged 3.The ambient temperature is too high 4.The module thermistor is damaged 5.The inverter module is damaged 	<ol style="list-style-type: none"> 1.Clean up the air duct 2.Replace the fan 3.Decrease the ambient temperature 4.Replace the thermistor 5.Replace the inverter module
16	Err.16	External equipment fault	Input external fault signal through the multi-function terminal DI	Reset run
17	Err.17	Communication fault	<ol style="list-style-type: none"> 1.The communication cable is not normal 2.The settings for communication expansion card F9.07 are incorrect 3.The settings for communication parameters F9 group are incorrect 4.The host computer is not working 	<ol style="list-style-type: none"> 1.Check the communication cable 2.Correctly set the communications expansion card type 3.Correctly set the communication parameters 4.Check the wiring of host computer

			properly	
18	Err.18	Contactora fault	1.Input phase loss 2.The drive plate and the contact are not normal	1.Check and eliminate the existing problems in the peripheral line 2.Replace the drive, the power board or contactor
19	Err.19	Current detection fault	1.Check Hall device 2.The drive panel is abnormal.	1.Replace the drive panel 2.Replace hall device
21	Err.21	Motor parameter auto tuning fault	1.The motor parameters was not set according to the nameplate 2.The identification process of parameter is timeout	1.correctly set motor parameter according to the nameplate 2.check the lead wire from the inverter to the motor
22	Err.22	Disk code fault	1.The encoder is damaged 2.PG card is abnormal 3.The encoder model does not match 4.The encoder connection has error	1.Replace the encoder 2.Replace the PG card 3.Correctly set the encoder model according to the Actual conditions 4.Eliminate the line fault
23	Err.23	EEPROM read and write fault	EEPROM chip is damaged	Replace the main control panel
26	Err.26	Inverter hardware fault	1.Overvoltage 2.Overcurrent	1.Eliminate overvoltage fault 2.Eliminate overcurrent fault
27	Err.27	Short-circuit to ground fault	Motor short to ground	Replace the cable or motor
28	Err.28	Cumulative running time arrival fault	Cumulative running time arrival fault	Clear history information by using initialization function parameters
29	Err.29	Custom fault 1	Input custom fault 1 signal through the multi-function terminal DI	Reset run
31	Err.31	Custom fault 2	Input custom fault 2 signal through the multi-function terminal DI	Reset run
40	Err.40	Total power-on time arrival fault	Total power-on time reaches the set value	Clear history information by using initialization function parameters
41	Err.41	Load drop fault	The inverter running current is less than F8.31	Confirm whether the load is removed or not or the settings for parameter(F8.31, F8.32) accord with the Actual operating conditions
42	Err.42	PID feedback loss when running fault	PID feedback is less than the set value of E2.11	Check PID feedback signal or set E2.11 to an appropriate value
51	Err.51	Quick current limiting fault	1.Whether the load is too large or the motor stall occurs 2.The type selection of inverter is small	1.Reduce the load and check the motor and its mechanical conditions 2.Choose the inverter with large power level
-	COF	Switch motor when running fault	Change current motor through the terminal when the inverter is running	Switch motor after the inverter stops

Appendix:Dimension drawing of PI550A1 keyboard installation opening (dimension unit: mm):

Powtran technology

A manufacturer of motor control intelligent products and devices based on motor design.
